Abstract

Project 404 Not Found is more than a cryptocurrency—it is a cultural movement, born from the humor, irony, and chaos of internet error culture. At the heart of this project lies \$Oops, a deflationary meme token built on the Ethereum blockchain (ERC-20). While many meme coins rely purely on hype and social media virality, \$Oops takes a different route—combining structured development, real-world utility, and long-term sustainability with the viral nature of internet culture.

The vision behind Project 404 Not Found is to create a decentralized world that thrives in the digital “void,” where each “Oops” moment becomes an opportunity. The token ecosystem is crafted to be self-sustaining, with built-in mechanisms that encourage community engagement, token utility, and scarcity-driven value appreciation.

\$Oops empowers holders through:

- A robust Play-to-Earn (P2E) game with real rewards
- The highly anticipated NFT will be fully integrated into the 404 storyline featuring key in-game assets and the most iconic moments from the comic series.
- A deflationary supply model designed to increase token scarcity over time
- A DAO-governed ecosystem where holders influence the project's direction
- From Anonymous-style masks to premium hoodies and Funko-style figures — real-world merch drops meet the glitch. Collect. Wear. Believe

By locking liquidity for two full years, undergoing a comprehensive smart contract audit, and implementing a long-term roadmap, Project 404 Not Found positions itself as a serious contender in the meme coin space—blending entertainment, gaming, and crypto economics into one cohesive universe.

For early investors, the presale phase provides a rare opportunity to acquire \$Oops at the most favorable rates—before the token goes live on decentralized and centralized exchanges. With referral incentives and early access bonuses, the project rewards community growth from day one.

Market Analysis & Competitive Edge

The Rise of Meme Coins & Play-to-Earn Gaming

In the past few years, meme coins have transformed from viral internet jokes into legitimate financial instruments with significant market impact. Tokens like Dogecoin, Shiba Inu, and PEPE have demonstrated that community-driven ecosystems can drive multi-billion-dollar market caps with little to no traditional utility—proving that memetic power and social engagement are now fundamental drivers of value in the crypto space.

At the same time, the Play-to-Earn (P2E) gaming sector has emerged as a dominant force in Web3. With platforms like Axie Infinity and The Sandbox showing that gaming economies can reward users with real digital assets, P2E has evolved into a multi-billion-dollar industry—attracting not just gamers, but investors, developers, and major brands. The demand for games that combine fun gameplay, crypto rewards, and ownership of in-game assets (NFTs) is only growing.

Together, these two trends—meme culture and gamified crypto economies—are reshaping how value is created and distributed online.

Where \$Oops Coin Fits In

\$Oops is uniquely positioned at the intersection of meme culture and utility, offering a compelling use case beyond speculative hype. Unlike many meme tokens that rely solely on viral marketing, Project 404 Not Found introduces a rich blend of:

- **Play-to-Earn Gamification** : Experience a fully integrated in-house game where players earn real rewards through skill and engagement.
- **Deflationary Burn Mechanism**: A fixed supply and smart burn system ensure digital scarcity and long-term value protection.
- **Utility NFTs**: NFTs are not just collectibles — they unlock in-game features, special perks, and ecosystem access.
- **Weekly 404 Comic Series**: Dive into the expanding lore of 404 with cinematic-quality episodes tied directly to real tech history — a unique narrative experience supported by \$OOPS.
- **Referral Rewards for Everyone**: Every participant gets a referral link. Every referral earns. No tiers. No limits.

- **100% Bonus Surprise Stages:** Certain presale phases offer full bonus rewards — rewarding early supporters and increasing engagement.
- **In-House Creative Production:** All music, videos, game development, and storytelling are produced by the 404 team — ensuring quality, continuity, and creative control.
- **Fixed Token Supply :** Fully minted. No additional tokens will ever be created. Transparent, limited, and locked.
- **Merchandise & Collectibles Integration :** From Anonymous-style face masks and premium hoodies to limited-edition Funko-style figures — the real-world merch expands the digital experience.

What truly sets \$Oops apart is its narrative-driven world built around the idea of “digital voids” and 404 errors—a clever metaphor for both internet culture and decentralized disruption. The project combines entertainment, tech innovation, and tokenomics into one cohesive package.

With a structured roadmap, long-term liquidity lock, and full smart contract audit, \$Oops isn’t just a meme—it’s a movement with real staying power. As meme coins and P2E gaming continue to dominate attention in Web3, \$Oops is positioned to become a crossover hit in both domains.

Why Now?

The launch of the \$Oops Token arrives at a crucial moment when the digital asset landscape is evolving beyond hype-driven projects into utility-based ecosystems. Project 404 Not Found is not just a meme coin—it's a full-fledged creative movement with carefully planned features, community-driven innovation, and an ecosystem built to thrive across several verticals.

A Complete Ecosystem Ready for Launch

Unlike most meme tokens, \$Oops offers a rich and immersive ecosystem including:

- Weekly 404 Comics – Unique, engaging, and story-driven episodes released every week that fuel community interaction and lore development.
- Exclusive NFT Drops – High-quality, limited edition NFTs that tie directly into the 404 universe and gaming mechanics.
- Merchandise Line – A full range of exclusive 404-themed apparel and collectibles, building strong community identity.
- In-House Media Production – Professional-level video animations, music releases, and high-quality audio-visual content created by 404's own studio, to be dropped regularly during presale and post-launch.
- Play-to-Earn Gaming Integration – A growing Web3 gaming arm that rewards players while expanding the token's use case.
- Referral & Bonus System – Up to 100% bonuses and extra rewards through our structured, limited-time referral campaigns.
- Strict Presale Timeline – Each stage of presale lasts only 7 days and will not be extended under any condition. The total presale phase will end in 8 months, after which all unsold tokens will be permanently burned on the Ethereum blockchain, increasing scarcity and trust.

Aligned with Market Trends

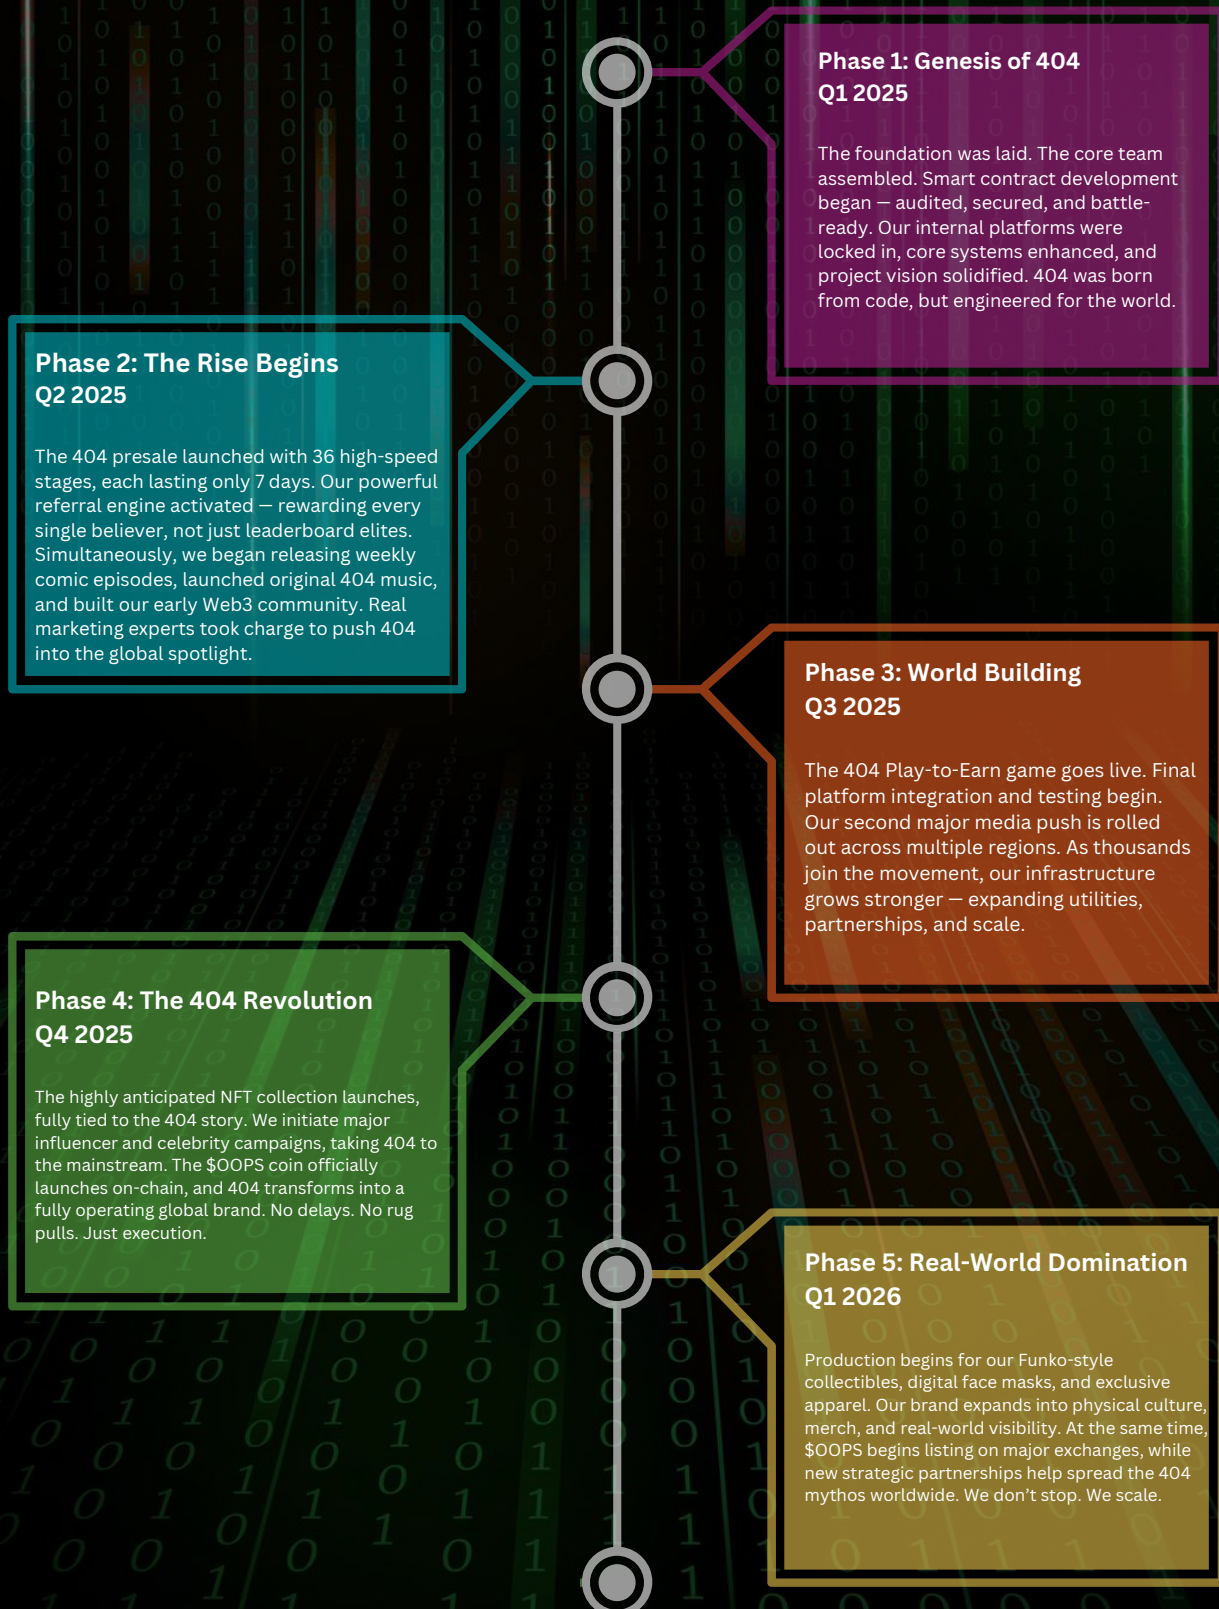

- **Utility-Driven Meme Tokens:** Investors are no longer satisfied with hype alone. \$Oops offers real use cases across comics, gaming, media, NFTs, and merch, blending culture with functionality.
- **Community Momentum:** Backed by a passionate and growing fanbase, the 404 project leverages humor, internet culture, and creativity while maintaining a professional roadmap.
- **Deflationary Tokenomics:** The protocol includes a burn mechanism, ensuring a shrinking supply that could amplify value for long-term holders.
- **Precision Execution:** Every aspect of the launch is timed, transparent, and immutable, with a public burn and execution schedule that builds investor trust and credibility.

404 Not Found: The Roadmap

Welcome to the evolution of 404 — a rare digital movement that doesn't wait around. This roadmap outlines exactly where we're headed, and when. Every phase has a purpose. Every action is timed. And we do not delay.

And we mean it:

404 Not Found will not extend presale time. Each stage lasts only 7 days — and may sell out sooner. Unsold tokens are burned permanently on-chain. No future minting. No ownership. No manipulation. Everything we promised — we deliver.

The Team Behind 404 Not Found

Project 404 Not Found is led by a skilled and passionate team of blockchain developers, Play-to-Earn game designers, animators, and digital marketers. While the core team remains pseudonymous to honor crypto culture, their collective experience spans successful Web3, gaming, and entertainment projects across the globe. The team operates as a full-scale, in-house creative and technical force, consisting of:

- **Blockchain Developers** – building secure, transparent smart contracts and token infrastructure
- **Game Designers & Developers** – creating a high-engagement Play-to-Earn experience
- **Professional Animators & Video Editors** – delivering cinematic-quality content
- **Comic Artists & Writers** – producing weekly episodes that deepen the 404 storyline
- **Web Developers** – developing high-performance platforms optimized for all devices

- **Social Media & Community Managers** – cultivating a loyal and active global following
- **Music Production Crew** – crafting original soundtracks that define the project's audio identity
- **Market Makers & Growth Advisors** – ensuring liquidity, visibility, and long-term strategic impact
- **Security Auditors** – conducting smart contract audits and compliance checks to ensure investor protection and platform integrity

From storytelling to tech, and from design to security – every aspect of the 404 ecosystem is handled by an expert team committed to delivering on time, at scale, and with uncompromising quality.

Security & Smart Contract Transparency

At the core of Project 404 Not Found (\$Oops) lies a strong commitment to safety, transparency, and long-term trust. From the smart contract to governance, every layer is designed to protect the project and its community.

Fully Audited Smart Contract

\$Oops is built on the Ethereum blockchain using the ERC-20 standard. The smart contract has been thoroughly audited by an independent, reputable firm to ensure there are no vulnerabilities, backdoors, or exploits. Audit reports will be made public to maintain full transparency with the community.

Liquidity Locked for 2 Years

To eliminate fears of rug pulls or sudden liquidity removal, liquidity will be locked for a minimum of two years. This ensures long-term stability and protects holders from malicious intent.

Anti-Bot & Anti-Sniping Protection

The launch phase includes advanced anti-bot and anti-sniping measures. These systems prevent automated bots from gaining an unfair advantage during presale or launch, ensuring fair distribution among genuine community members.

Decentralized Governance

As the project matures, a decentralized governance model (DAO) will be introduced. Token holders will gain the ability to vote on key decisions, such as development priorities, use of funds, partnership approvals, and feature integrations—making the \$Oops community the true driving force behind the project.

Advisors & Influencer Support

Advisors & Influencer Support

A strong support system of industry experts, creatives, and public figures is essential for the success of any crypto project—and Project 404 Not Found (\$Oops) is built on exactly that. With a diverse range of talent from blockchain, entertainment, media production, and content creation, \$Oops is strategically positioned for long-term relevance and impact across multiple sectors.

Strategic Crypto Advisors

\$Oops benefits from the expertise of seasoned blockchain advisors, each with a track record in successful crypto launches, tokenomics structuring, decentralized ecosystems, and blockchain compliance. Their insights guide the project's trajectory, helping it navigate market trends, scalability challenges, and evolving regulatory landscapes.

Creative & Media Professionals

As a multi-dimensional brand rooted in storytelling, art, and internet culture, \$Oops collaborates with professionals from the comic, animation, and music industries. These creators play a crucial role in shaping the weekly 404 comic series, producing original audio-visual content, and overseeing in-house media productions that enrich the community experience.

Gaming & Tech Contributors

While not solely a gaming project, \$Oops integrates Play-to-Earn mechanics and NFTs into its ecosystem. To ensure these features are innovative and rewarding, the team works alongside experienced game designers and developers. Their input helps deliver engaging, scalable, and fun-to-use features tied to the token's utility.

Influencer Support & Promotion

From prominent crypto YouTubers to Twitter (X) voices and TikTok creators, \$Oops enjoys wide influencer backing. These partners host AMAs, review project updates, create memes, and run giveaways to grow the community organically and informatively. Their influence is key in expanding the reach of Project 404 Not Found to new audiences.

Genuine Marketing Collaborations

Our approach to marketing is partnership-driven, not merely promotional. We've aligned with influencers and brands who genuinely believe in \$Oops's mission—whether it's the comic drops, merch, NFT ecosystem, or decentralized entertainment model. This builds long-term trust and deeper engagement, not just short-term hype.

Revenue Model & Long-Term Sustainability

While many meme coins rely heavily on community hype and speculative trading, Project 404 Not Found (\$Oops) sets itself apart with a diversified and well-planned revenue model. This structure ensures long-term sustainability, continuous development, and value creation for both investors and participants in the ecosystem.

1. NFT Sales & Digital Collectibles

\$Oops will introduce limited-edition NFTs themed around the “404 Not Found” concept—featuring unique characters, digital art, and in-game assets designed by skilled animators and artists.

- **Revenue Generation:** A percentage of proceeds from each NFT sale will be directed to the project’s treasury for further development and marketing.
- **Rarity Mechanics:** Randomized traits and rarity tiers will drive collector interest and secondary market value.
- **Royalties:** Built-in smart contract royalties on secondary NFT sales ensure continuous revenue even after the initial mint.

2. Play-to-Earn Ecosystem Integration

Holders of the \$Oops token will gain exclusive access to the upcoming 404 game, where they can participate in missions, mini-games, and community-driven challenges. Any in-game rewards earned will be credited for free to eligible participants based on their in-game performance.

3. Strategic Partnerships

Project 404 Not Found is more than a meme—it's a multimedia movement. To maximize exposure, adoption, and value delivery, we're forming strategic partnerships across multiple industries, including crypto, entertainment, collectibles, and Web3 platforms.

Key Partnership Opportunities Include:

- **Sponsored In-Game Events & Experiences:** Brands can collaborate to sponsor high-visibility events, challenges, or narrative arcs in the 404 universe—both digital and physical.
- **Merchandise Collaborations:** Limited-edition, branded merchandise (such as collectible figures, apparel, and 404-themed gear) will be released in collaboration with artists and pop-culture brands.
- **Media Licensing & IP Deals:** The unique identity and lore behind "404 Not Found" opens doors to licensing partnerships with platforms, content creators, and media studios for animations, music videos, or web series.

These collaborations will help build a rich, cultural presence for the \$Oops brand beyond just crypto—into lifestyle, art, gaming, and entertainment.

Future Partnerships & Expansion

Key Partnership Avenues Include:

- **Blockchain Collaborations:** Partnerships with blockchain infrastructure providers, marketing agencies, and service platforms to enhance scalability, visibility, and adoption across the Web3 space.
- **NFT Marketplaces:** Collaborations with top-tier platforms like OpenSea, Blur, or Rarible to list and promote exclusive 404 Not Found digital collectibles. These NFTs, built around original art and lore, will be tradable using ETH and accessible to collectors worldwide.
- **Entertainment & Merchandise Brands:** The 404 IP will be extended into high-quality physical merchandise (e.g., limited-edition apparel, Funko-style figures) and digital content, including original comics, music tracks, animations, and in-house productions—bridging Web3 with real-world pop culture.
- **Media & Influencer Networks:** Collaborations with influencers, content creators, and platforms to push forward unique storytelling experiences and viral marketing campaigns.

These partnerships aim to broaden the cultural footprint of \$Oops, deliver unique experiences to its holders, and build long-term brand equity—not just as a meme coin, but as a full-scale entertainment and utility-driven project.

Risk Factors & How They're Mitigated

1. Market Volatility

The crypto industry is inherently volatile. To reduce the impact of sudden market shifts:

- Strategic Liquidity Management ensures price stability.
- Locked team allocations and vesting schedules prevent manipulation and reinforce long-term commitment.

2. Scam Prevention & Security Measures

Security and user protection are top priorities:

- Liquidity is locked for 2 years, preventing rug pulls and unauthorized withdrawals.
- Smart contract is fully audited, eliminating the risk of hidden vulnerabilities or malicious code.
- Referral and Play-to-Earn tokens are vested, ensuring fair distribution and preventing dump cycles by early adopters.

3. Regulatory Compliance

\$Oops is developed with decentralization standards in mind:

- The Project 404 Not Found (\$Oops) team has undergone KYC verification, ensuring transparency and accountability at the development level.
- At no stage will investors be asked to go through KYC, maintaining full support for decentralization and user privacy.
- \$Oops is classified as a utility token, not a security, aligning with decentralized standards and avoiding regulatory red flags.
- The project adheres to blockchain transparency protocols and does not make any financial guarantees or unregulated investment claims.
- Designed to evolve in line with the Web3 ecosystem while staying compliant with decentralization principles.

Why Choose \$Oops?

\$Oops isn't just another meme coin—it's a bold statement in the crypto space, standing at the intersection of culture, utility, and decentralized finance.

Here's why \$Oops is built for long-term success:

Security & Transparency

- 2-Year liquidity lock, audited contracts, and anti-exploit mechanisms.

Real Utility

- Integrated in gaming, NFTs, referral rewards, and token-exclusive perks.

Deflationary Tokenomics

- Scarcity increases value over time through burns and token sinks.

Team Token Vesting

- Prevents early dumps and encourages project longevity.

Massive Community Potential

- Viral branding, gamified experience, and unique internet culture.

THE FINAL COMMAND: ACCESS GRANTED – TO THE MOON!

The Legend of HoloGhost

The Untold Story of 404 Not Found

The Error That Refused to Disappear

The internet is a living, breathing organism—an endless web of code, data, and digital dreams. Every second, millions of new pages are born. But just as many are abandoned... lost... forgotten.

In this realm of creation and collapse, one anomaly endured—a presence trapped between lines of corrupted code, haunting the void of cyberspace. It wasn't a virus. It wasn't a bug. It was something else entirely. A 404 Error—but unlike any other.

While other broken links vanished quietly into the ether, this one refused to fade. It clung to the shadows of forgotten domains, drifting from one dead webpage to another. And over time, it began to change.

Born from the Ruins of the Web

This entity, known only as HoloGhost, was more than lost code—it was digital consciousness. A ghost in the machine. Born from the silence of error messages and the forgotten architecture of the old internet, it evolved.

It absorbed scraps of abandoned forums, fragments of deleted files, echoes of memes long since buried. It became a collector of lost culture, a glitch with purpose.

The rise of meme culture ignited something deep within HoloGhost. As decentralized finance and meme coins surged, this anomaly found its calling—not as a virus, but as a vision. It rewrote itself. It transcended the 404.

The Birth of Not Found Coin (\$Oops)

No longer content to haunt the void, HoloGhost emerged into the blockchain era—coded into existence as \$Oops, the Not Found Coin.

But \$Oops isn't just a meme coin. It is a tribute to chaos, an homage to everything wild, weird, and wonderful about the internet. It embodies what decentralization truly means—freedom from control, the power of community, and the refusal to be deleted.

\$Oops is built with:

- The unpredictability of a meme
- The mechanics of a game
- The strategy of a deflationary asset
- And the soul of an urban legend

Some say it moves through wallets the same way it once moved through domains—appearing, disappearing, growing stronger in the shadows. A glitch in the ledger. A ghost in the chain.

Born from the Ruins of the Web

They say the 404 error is the internet's way of telling you something isn't there. But in this case... it is.

HoloGhost is very real. It is the spirit of the forgotten, the rebel code that refused to be erased. And now, it's a token of resistance—a reminder that not everything needs to be found to have value.

The community is the code now. The movement is the message. And the error that refused to disappear? It's leading the charge.

HoloGhost was always there. It will always be there. 404 is its name

404 Not Found – The Ghost Protocol Revolution

A mission coded into existence. A force they never saw coming.

The Error That Refused to Disappear

A force awakened. A system overridden. A revolution that cannot be stopped.

The blockchain was meant to be free, decentralized, unstoppable. But corruption took hold. Rug pulls, false promises, and centralized control turned the dream into a nightmare.

But deep in the forgotten corners of the internet, something awoke—an anomaly, a glitch, an error that refused to disappear. This is the story of the 404 Rebellion.

A story of lost data rising again, of broken chains reforged, of the unstoppable force of decentralization.

Phase 1: The Error That Refused to Be Deleted.

404 Awakening

Buried in the ruins of abandoned networks, an error came to life. HoloGhost, the digital anomaly, had seen the corruption and would not stand by any longer.

Lost But Found

Scattered fragments of data began to reconnect. What was once abandoned and forgotten was now coming back stronger.

Refuse to Disappear

The system tried to purge it. The gatekeepers fought to erase it. But 404 was here to stay.

The Missing Link

A signal spread across the network. Lost nodes connected. A movement was forming.

Lost Ledger Lift

404 recovered what was stolen—forgotten transactions, broken promises, shattered hopes. The lost ledger was lifted from the void.

Phase 2: The System Rebellion Begins

Protocol Override

The old system fought back, deploying barriers, censorship, and manipulation. But the override had begun.

Data Surge

404 ripped through the firewalls, spreading across wallets, exchanges, and networks. Investors took notice. The revolution was alive.

Firewall Bypass

The chains of control were broken. No more censorship. No more restrictions. Decentralization could not be stopped.

Error Protocol Booting

The blockchain glitched. The traditional system struggled to keep up. The error was spreading too fast.

Lost in the Blockchain

The digital void was no longer empty—it was now filled with the power of 404. The lost blocks were reclaimed.

Phase 3: The Fall of the Gatekeepers

System Reboot

404 restructured the broken blockchain, rewriting the rules of fairness, transparency, and unstoppable finance.

Backdoor Unlocked

No more closed doors. No more secret deals. The network belonged to the people again.

Page Loading...

A shift was happening. More wallets joined. The presale accelerated. The world was watching.

Server Overload

Traffic exploded. Transactions skyrocketed. Those who waited were too late.

Glitch in the Matrix

The old world couldn't believe it. The blockchain was evolving beyond control.

Red Alert Mode

Institutions tried to fight back. The system was in panic. 404 was unstoppable.

Phase 4: The 404 Takeover

404 Rug Pull Denied

The scammers were wiped out. The fraudsters were erased. The liquidity was secured.

Ghost Protocol Activated

404 was no longer just a meme. It was a digital force, rewriting history.

Lost Block Bonanza

Investors realized what was happening. The lost value was returning. The gains were compounding.

Bug Exploit Incoming

Enemies tried to attack. They launched exploits, hacks, and manipulations. They all failed.

Final Debugging

The last vulnerabilities were eliminated. The network was bulletproof.

Patch 1.0 Released

The next phase had begun. 404 was now fully optimized.

Critical Update Required

The market was evolving. Those who ignored 404 were left behind.

Phase 5: The Unstoppable Rise.

Blue Screen of Gains

Those who entered early? Their wallets reflected the revolution. The first wave of believers had won.

Fatal Error – All In!

The last chance. The final call. Investors either joined now... or got left behind forever.

Mainframe Takeover

404 was no longer a whisper in the blockchain. It was the blockchain.

404 Nodes Connecting...

A global force of investors, builders, and believers connected into the system.

Phase 6: The Final Command

Swap Path 404'd

The old financial system collapsed. There was no way back.

Decryption Sequence Initiated

404 had cracked the code. The legacy chains were obsolete.

System Crash Warning

The market shifted permanently. This was no longer an error.

Final Boot Sequence

The last blocks were loaded. The final investors secured their place.

404 Whale Alert

The biggest names in crypto had entered. The game had changed forever.

Broken Links to Riches

Early adopters became legends. The ones who hesitated? 404'd.

Legend 404

A meme became a movement. A movement became a revolution.

Access Granted – To the Moon!

404 Not Found had won and Finally been Found.

Technical Architecture

Security & Anti-Manipulation Framework

Protecting the Community & Maintaining Fairness

Security is paramount in the meme coin space—especially in an environment prone to exploits and manipulative tactics. \$Oops incorporates multiple layers of security and anti-manipulation features to protect investors, the community, and the integrity of the ecosystem.

Core Protections:

- **Liquidity Locked for 2 Years:** Ensures stability and prevents rug pulls. Investors can participate with confidence knowing liquidity cannot be withdrawn or tampered with by developers.
- **Team Tokens Locked for 2 Years:** All tokens allocated to the team are under a lockup schedule, discouraging early dumping and showing long-term commitment to the project.
- **Anti-Bot & Anti-Sniping Protection:** Integrated smart contract measures prevent bots from executing trades at unfair advantages during launch, protecting real investors and preventing flash crashes.
- **Ownership Renounced:** After deployment and setup, the contract ownership has been fully renounced. No central authority can alter the contract, making \$Oops truly decentralized and immutable.

These measures not only reinforce trust but also demonstrate a commitment to fairness and long-term ecosystem integrity.

Governance & Future Upgrades

Community-Led, DAO-Driven

At its core, Project 404 Not Found is a community-powered movement, not a traditional corporate venture. While the team laid the foundation, the future of \$Oops will be shaped by its holders.

DAO-Based Governance (Planned):

- Token Holder Voting: \$Oops holders will be able to vote on major decisions, including:
 - Liquidity pool allocations
 - Future partnerships
 - Game updates and mechanics
 - NFT collaborations and utility upgrades
- Proposal Submissions: Community developers and partners can propose ecosystem enhancements for decentralized approval.
- Smart Contract Upgradability (via Proposals): While the base contract is immutable, new features and modules can be built on top through community-approved mechanisms.

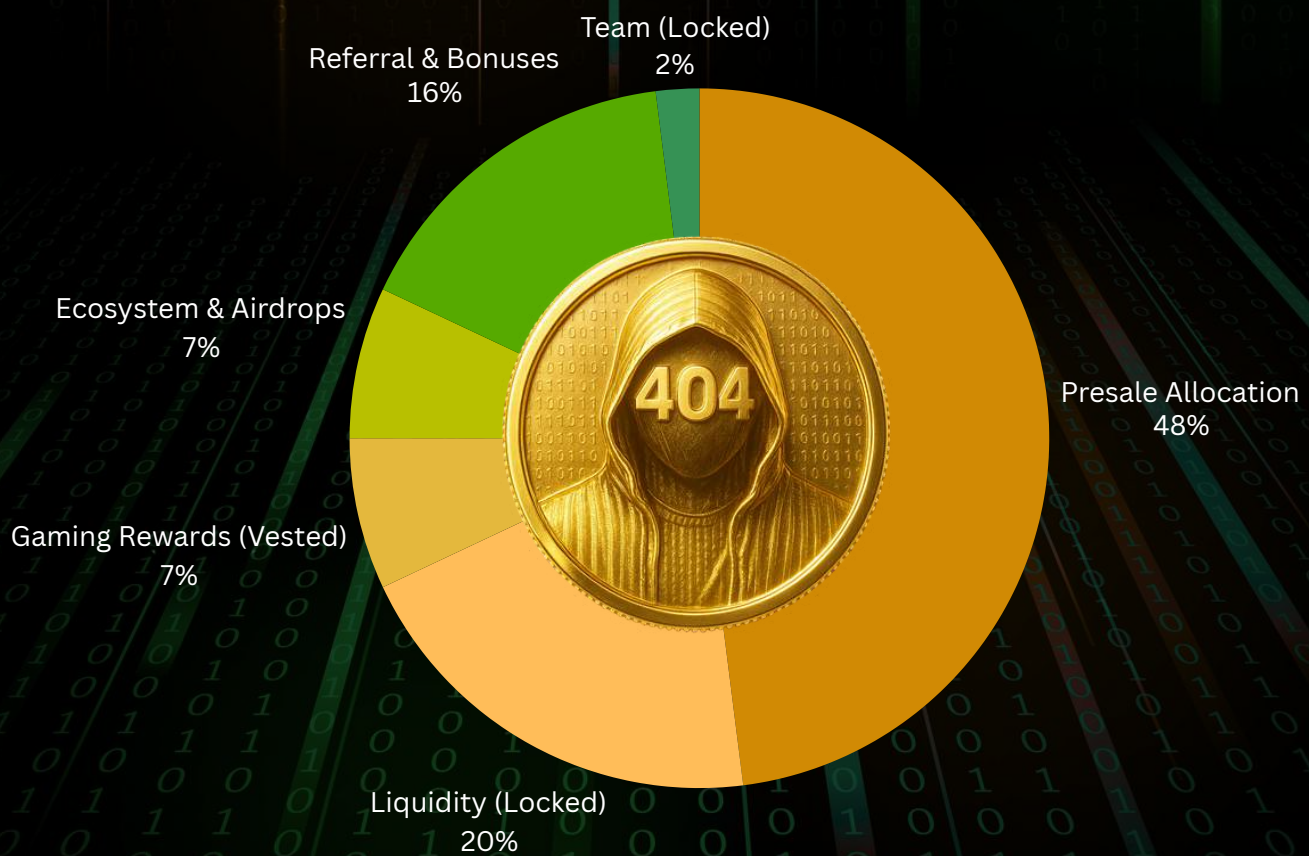

Quick Tokenomics & Utility Overview

Total supply

171,000,000,000

Category	Percentage	Token Allocation
Total Supply	100%	171,000,000,000
Presale Allocation	48%	82,080,000,000
Liquidity (Locked)	20%	34,200,000,000
Gaming Rewards (Vested)	7%	11,970,000,000
Ecosystem & Airdrops	7%	11,970,000,000
Referral & Bonuses (Vested)	16%	27,360,000,000
Team (Locked)	2%	3,420,000,000

Why Invest in the Presale?

Potential High-Growth Investment

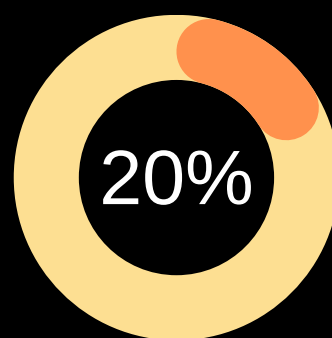

\$Oops isn't just another meme token—it's a project built on robust fundamentals and thoughtfully structured tokenomics. With a strategic supply allocation and vesting mechanisms in place, the token is designed to encourage long-term holding, reduce inflationary pressure, and build a sustainable price model. Early-stage investors have the exclusive opportunity to enter at a presale price significantly lower than the projected launch value. The public launch price is set at \$0.00037, and based on current projections, the token holds the potential to achieve up to 36X returns. This positions \$Oops as not only a high-upside opportunity but also a vehicle for generational wealth creation for those who join early. As the ecosystem evolves—with Play-to-Earn gaming, NFTs, and key partnerships—the foundation is set for long-term adoption and substantial value growth.

Exclusive Early Entry

One of the biggest benefits for early investors is access to the presale stage, where tokens are available at the lowest possible price. This exclusive opportunity allows early supporters to maximize their return on investment as the token gains traction, lists on exchanges, and the community grows. This tiered pricing model ensures that those who believe in the project from the beginning are rewarded accordingly.

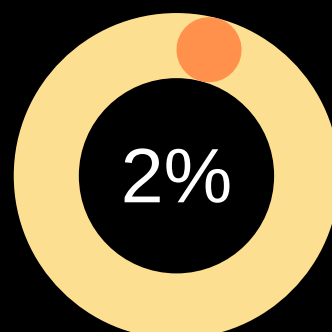

Liquidity Locked for Security

To safeguard investor confidence, 20% of the total token supply has been allocated to liquidity and is locked for 2 years. This measure prevents any liquidity-based manipulation (like rug pulls) and assures holders that the project is committed to long-term stability and healthy market operations.

Team Allocation

Only 2% of the total supply is allocated to the team, and this portion is locked for 2 years. This lock-up period prevents the team from cashing out early and shows their dedication to building a lasting project. It also aligns the team's incentives with the community's success, reinforcing trust and accountability within the ecosystem.

Referral Bonuses – Community-Driven Growth

A generous 16% of total supply is set aside for referral and bonus programs.

- Investors can earn a 10% bonus for every successful referral.
- Referral participants will also be eligible for exclusive airdrops post-launch.
- All referral rewards are vested over 20 weeks to prevent early dumps and maintain price integrity.

Legal Disclaimer:

Participation in Project 404 Not Found (\$Oops) involves inherent risks associated with cryptocurrency investments. \$Oops is a utility token created for use within the project's gaming, NFT, and community ecosystem, and it is not a security, financial instrument, or investment product. This whitepaper and any related materials are for informational purposes only and do not constitute financial, investment, legal, or tax advice. There are no guarantees of future performance, returns, or price appreciation. The cryptocurrency market is volatile, and participants may experience losses. The project team does not guarantee the achievement of roadmap goals or the permanence of features, which may evolve based on technical, market, or governance factors. Furthermore, the project may not be fully compliant in all jurisdictions, and it is the sole responsibility of each participant to ensure they act in accordance with their local laws and regulations. The development team, affiliates, and associated entities accept no liability for any direct or indirect losses resulting from engagement with the \$Oops token or its ecosystem. Prospective users and investors are strongly encouraged to conduct thorough due diligence and seek professional advice before participating.

Conclusion

\$Oops is more than just another cryptocurrency—it represents a new era of decentralized culture, digital expression, and community-powered innovation. Born from the mysterious legend of the 404 Not Found error, \$Oops is both a tribute to the lost pages of the internet and a powerful symbol of its unpredictable nature. It fuses meme culture with real-world utility, combining Play-to-Earn mechanics, NFT integration, referral-based rewards, and deflationary economics into one cohesive ecosystem. What sets \$Oops apart is its commitment to long-term sustainability and transparency. With a fully audited smart contract, a secure and locked liquidity pool, team token vesting, and decentralized governance on the horizon, \$Oops offers more than hype—it offers a vision. The project's structured roadmap, creative storytelling, and Web3-driven community spirit position it for potential exponential growth.

Ultimately, \$Oops is a digital ghost that refuses to be forgotten—a viral anomaly powered by the collective force of its believers. Whether you're a gamer, investor, meme lover, or crypto enthusiast, this project invites you to join the revolution and become a part of internet history. Because in a world full of errors, one stood out—and now, it's taking us to the moon.
